

STEP 2

Trip Trap Wood Lye or *your choice of Stain/Dye* - Application Instructions:

Wood Lye:

Stir the lye to break up the color pigments and shake well before and during use.

Pour a small amount of **TT Wood Lye** into a **paint tray** or other useable container.

Wear latex gloves during the application procedure. Wash skin and eyes with soap and warm water should they come in contact with the wood lye.

Do not apply lye across the wood grain! Lye applied this way will leave streaks as the lye has white or gray pigments in the mix. The streaks will have to be removed before the oiling process.

With a **nylon brush or roller**, apply the wood lye evenly along the wood grain until the floor has been completely coated.

Use 1 liter of lye or more for every 100 sq. ft. of flooring.

Clean the work tools with water.

Allow the floor to dry for a minimum of 8 hours at 70 degrees.

Please note:

Trip Trap Wood Lye is non-corrosive.

Your Choice of Stain or Dye:

If you choose to apply your stain or dye be aware that only one coat may be applied otherwise an insufficient amount of Master Oil will penetrate into the wood. Conduct a test in a small area before proceeding with your project.
